# Annual Report of the Vice-President

## J. P. HENICAN

NEW ORLEANS, February 9th, 1920.

His Excellency, Ruffin G. Pleasant, Governor of the State of Louisiana, and Ex-Officio President of the Board of Administrators of the Charity Hospital of Louisiana, Baton Rouge, La.

Your Excellency:—It is a source of genuine pleasure to be in a position to chronicle constructive advancement in many, if not all, departments of our institution during the past year.

While our financial statement discloses a small deficit as to fixed income and ordinary expenditures, there have been no necessitous withdrawals from the Special Fund Account for the benefit of the General Fund, making possible the use of the former in the manner prescribed, and it is with pardonable pride we call attention to the physical property rapidly approaching a condition of excellence that requires only a few major additions to permit of the realization of our ambition to reach the status of completeness warranted by the importance of our obligation to the community, assumed through this work of commendable public benefaction.

The bounteousness of the State in granting our appeal for an increase of appropriation rendered possible the building of a commodious warehouse, amply spacious for present and future requirements, and in a short while a considerably enlarged and up-to-date morgue will be completed, these additions affording facilities which have been sadly lacking for many years past. Coincidently, the heating system has been completed, new and highly efficient X-ray apparatus installed, and work is now actively in progress involving the wiring and placement of electric fixtures in all of the hospital wards to effectually correct the antiquated lighting system so long in use.

It is quite true our experience has been no different to that of the world at large in the matter of an advancing wage scale, to which may be ascribed the deflection of many persons who might otherwise have adopted nursing as a profession, and creating a serious shortage in the student body. The prevailing high cost of living is only too fully realized to require special comment, but every effort has been adopted to frugally administer the resources under our direction, and to maintain the standard of relief afforded the unfortunate applying for succor. Our usual housekeeping expenses have expanded materially, especially so in the matter of cotton products, sheeting, gauze, wadding, etc., to say nothing of the extraordinary appreciation of prices for drugs and instruments. Nevertheless, our cost per patient per day of \$1.37 will, I feel sure, bear very favorable comparison with that of any other similar institution of equal size. However, we have recently encountered a situation which demands immediate attention. Owing to a change in ownership of the building used for housing our female help, it was necessary to vacate the premises on short notice, forcing us to the extreme measure of making use of some of the hospital wards as sleeping quarters, an altogether intolerable condition, which was remedied with the least possible delay through requisition of the upper floor of the storeroom, and while a trying and serious predicament was overcome, temporarily, the need of much larger quarters for this purpose is imperative, and it is entitled to serious consideration and immediate attention.

Among the major pressing improvements, modern fire prevention and protection stands out conspicuously. Aside from the property investment which in the existing high cost period is by no means immaterial, the potential feature is the safety of the patient. In this connection, our Sprinkler Fund Committee have solicited and received many contributions, but as yet the amount is wholly inadequate to meet the cost of the work contemplated. It would appear opportune to

point out here that an outstanding appropriation of \$5,000.00 for fire escapes (which the best thought on the subject pronounce impracticable) through the usually proper procedure, should be transferred to this Sprinkler Fund, and I would venture the suggestion that steps be taken to consummate this. Meanwhile, in view of the specific character of this appropriation and of the donations in question, they have been invested in 4½% Treasury Notes, to be held in trust in the hope that the State will now find it expedient to supply the additional sum required to permit of the accomplishment of this most necessary equipment.

Despite careful and energetic efforts to devise a suitable plan for the erection of our own power plant for generating electricity, an impossible situation in the matter of cost was encountered, but with the added expense incident to the general extension of the electric lighting system, of which we have previously made mention, there is revived the important question of the judiciousness of depending entirely upon the public service, as well as the economy of production, and in this latter connection we are of the opinion that a great saving in overhead expense would be effected in this direction, the same as has been demonstrated by our bakery and ice plant. Accordingly, we are asking that the funds required be made available, at least during the ensuing two years, if not earlier.

Professional and scientific opinion are apparently unanimous concerning the relative importance of the pathological department in hospital life, and while the work accomplished with the material and resources available is highly commendable, an increase of budget would undoubtedly permit of certain necessary betterments calculated to augment and broaden the scope of its activities, a fact entitled to serious consideration having, as it does, direct bearing upon the intelligent care and treatment of the patient.

Stimulated by a desire to promote efficiency, it has been considered advisable to employ as Superintendent of Clinics, Miss Sara Babb, whose work, although only inaugurated a short while, is daily becoming manifested, and with the formation of the Society of the Medical and Surgical Staff, having for its ultimate object more active co-operation between the professional and administrative branches, it is to be hoped that many beneficial changes will follow, looking to discipline generally, keeping of histories, etc.

Many generous citizens have earned our gratitude through substantial donations which have contributed to the comfort of our unfortunate sick, not the least among them being the wonderful gift of Mrs. John Dibert of two ambulances, and that of Judge Joseph A. Breaux, a new kitchen range, for which our needs were great, as well as bountiful supply of garments furnished by the Needlework Guild of the Ladies Auxilliary who have undertaken a most praiseworthy work in removing this long-felt want. Nor are we unmindful of the splendid contributions of Sister Stanislaus and her co-workers whose ever watchful eye fathoms our most pressing needs and finds reflection in the Physicians Reception Room and a Receiving Room for patients, installed entirely through her individual effort.

Special mention is made of the fact that early in January our Chief Engineer, Mr. John Ponder, reached his fiftieth year in our service, a record of which he may justly be proud, made bright through numerous deeds of self abnegation, in our interest.

We are indebted, and are grateful, for the splendid support accorded us at all times by our Superintendent, Dr. S. W. Stafford, and for the loyalty and energy evidenced by our House Surgeons, Doctors Gelpi and Landry.

We are appreciative also of the painstaking efforts of our Secretary-Treasurer, Mr. Fred. W. Matthews, whose multitudinous duties have been discharged with conspicuous ability.

To my confreres of the Board, I am greatly indebted for their whole hearted co-operation and uniformly courteous treatment at all times.

Yours respectfully,

J. P. HENICAN,  
Vice-President.

# Report of the Medical Committee

NEW ORLEANS, February 23, 1920.

To the Vice-President and Board of Administrators of the Charity Hospital, New Orleans, La.

Gentlemen:—A little over a year, the Armistice was signed: legions dropped their murderous guns: the bivouac lost its glow with the dying embers of passion; and from the murky trenches, the squalid denizens revived, in the calm and balmy sunshine of Peace.

Then, Time with noiselessss footsteps started again on its mission of comforter, adjuster and pacifier, and in its cycle closes the fiscal year of our great Institution—one of reconstruction.

Although, in every walk of life, the World War left in its wake, the most deplorable imprints of its ravages and misery, yet, we are fortunate to acknowledge, that our institution has escaped from a condition of universal upheaval, in a manner that sheds and intense luster, on the keen foresight of a diligent Board of Administrators, of an active and progressive Superintendent, and on the deep solicitude and unswerving zeal of that model society of womanhood—the Sisters of Charity—to whose tenderness and motherly care, the unfortunate afflicted of our Institution, are especially entrusted.

A close inspection of our wards will immediately reveal the perfect system which exists in ministering to the patients; the efficiency and devotion of our Visiting, as well as of the Resident, Staff of Physicians, and, also, the intelligent and relentless work of our sympathetic nurses.

The work of the Medical Committee, has always been of a constructive nature; its attention has always been directed, to the most minute details concerning the welfare of the sick: medical attendance, comfort and hygiene; and, it feels proud to state, that no institution in the country, is more eager to extend a generous, liberal and benevolent hand of charity, to its postulants.

It is with deep gratitude, that we acknowledge and announce the gift of two new ambulances, during the past year, through the generosity of Mrs. John Dibert of New Orleans. We are now able to operate three ambulances, which are far from being excessive for the rapidly increasing demands, in our Accident Department.

Again, it is with unmeasured gratitude, that we report the munificent legacy of Mrs. Catherine Voss, of New Orleans; whose recognition of the Charity Hospital's great work for sick humanity, she so generously and practically asserted, in the sum of \$30,000.00. This legacy has, expressly, been made for the purpose of improving the Miles Amphitheatre. This intelligence will be received with pleasure by our eminent surgeons, who realize, that a more modern amphitheatre is urgently needed.

The ways and means of securing pupils to become Trained Nurses, has received our unlimited attention. This most important question still remains unsolved. Our training school offers exceptional opportunities to young women, who would desire to enter that most worthy professional field. We trust, however, that in the near future, we shall be able to solve this most vexatious question, by devising some means, of making that department most attractive to the young women.

We urgently recommend the purchase of an X-Ray bedside unit. In a large hospital as ours, patients are often conveyed a great distance to the X-Ray room, and according to the nature and condition of the injury of the patient, he is carried there or not, for examination. In many instances, on account of the precarious condition, and of the injury and danger of disturbing the patient, he is deprived of this most important examination. We, therefore, earnestly recommend this additional equipment. To the Solons of our great Commonwealth, we appeal for a more liberal appropriation, in the near future, for our urgent needs. Send us Mammon, the general who combines Wisdom, Knowledge and Power, to lead us on the way of greater efficiency "where seraphs might despair."

Surgical instruments, scientific apparatus, chemicals, etc., have soared in almost, prohibitive regions; and, unless they are acquired without much further delay, to maintain the highest standard in the field of efficiency, we shall be compelled to retrench, behind the curtain of a discouraging and uncertain opportunism.

We recognize, with unusual pride, the valuable and efficient services of our eminent House Surgeons, Dr. Maurice J. Gelpi and Dr. Jerome E. Landry; and it would be difficult for us, to express to them the measure of our appreciation for the devotion and zeal they have always displayed, in their trying duties: for the betterment of the patients, and the glory of the Hospital.

We desire to extend to our courteous, capable and indefatigable Secretary, Mr. Fred. W. Matthews, our warmest thanks for his many courtesies; and also for his eagerness, so generously shown us, at all times, to lessen our onerous duties.

In conclusion, we are encouraged to state that, believing the past to be a propitious augury for the future, we behold our peerless Institution in a vista of cheerful and brilliant colorings, of benevolence and progress which gives to the canvas, for the most critical, the unmistakable expressions, of the relentless and conscientious work, the ideals, character and talent of the diligent artist.

Yours respectfully,

ALBERT J. LAPLACE, Chairman

M. J. HARTSON,

J. P. HENICAN

# Report of the House Committee

NEW ORLEANS, LA., February 23rd, 1920.

To the Vice-President and Board of Administrators of the Charity Hospital, New Orleans, La.

Gentlemen:—The construction of a warehouse during the past year fulfilled a long-felt want, and its value has been amply demonstrated. We regret the necessity of having to use the upper floor for a Female Dormitory temporarily, as the lower floor space is congested and prevents the systematic and efficient methods contemplated in storing and handling merchandise. This condition further emphasizes the necessity for a separate building to house our help. The hospital owns ground upon which to erect a dormitory but lacks the funds to undertake it. The help proposition is a serious one and the advantages in having them housed near the hospital are manifold. We recommend and seriously urge prompt consideration of this matter.

In February, 1919, the matter of installing an electric plant, rewiring where necessary, and wiring such buildings as were not wired, was taken up with several consulting engineers for the purpose of considering the advisability of such a course. In due time, Mr. A. Wyndham Lewin was engaged to make a complete survey of the conditions and furnish an approximate estimate and to prepare plans and specifications. Several bids were received and the entire matter exhaustively considered from every angle, including the cost and advisability of employing coal or oil engines.

The lowest total prices contemplating the installation of steam engines was \$131,773.86; Diesel engine (oil) \$145,833.86.

Mr. Lewin estimated a current consumption of 52,000 K. W. hours per month. Representatives of the New Orleans Railways & Light Company estimated 30,000 K. W. hours per month. Two factors thus contributed to the inadvisability of undertaking at this time the installation of a complete electric plant, wiring and fixtures. First: the cost exceeded the amount available for such purposes; Secondly: owing to the difference in the calculation of K. Ws. per month, it was finally deemed expedient to consider the wiring, rewiring and fixtures in each building and by the installation of separate meters therein, taking service from the Railways Company, ascertain a definite basis to agree upon at some future time as to whether we would be justified in installing our own generating plant.

Finally, contract was approved for the installation of new wiring and fixtures throughout all the hospital buildings, excluding Laundry, Bakery and Ice Plant, at a net cost of \$56,215.16 which work is at this writing well under way, and in accordance with contract shall be completed by May 21st, 1920.

The inferior lighting service throughout the wards of the hospital has for years been the source of constant complaint and criticism. We are assured this objection will be fully overcome.

Many minor improvements have been accomplished during the year in other directions but the foregoing stands out alone as most worthy of particular mention.

Yours respectfully,

GEO. J. GLOVER, Chairman,  
TERENCE SMITH  
C. A. TESSIER

## Report of Finance Committee

---

NEW ORLEANS, February 23rd, 1920.

To the Vice-President and Board of Administrators, Charity Hospital

We were fortunate to close the year with a small deficit of \$6,217.18. Our receipts and disbursements increased and the admissions decreased yet our per capita cost per patient day advanced from \$1.12 to \$1.37. Rigid economy was observed in every department to such an extent it will become urgent to incur expenses during the coming year which were deferred in the past in order to conserve our funds.

A considerable saving was made early in the year by purchasing large quantities of gauze and other medical and surgical supplies which tided us over a period when the prices had advanced nearly 100%. This is substantiated by reference to similar articles recently purchased; as an instance, gauze during the early part of 1919 was purchased for \$3.30 per hundred yards; in January, 1920 at a cost of \$4.75, and the price at this writing is \$5.75.

Though keenly appreciative of the necessity of many economic improvements suggested, we were obliged to curtail and avoid a large deficit. This institution is a vivid index to the times, as during the past year we had fewer admissions and all pay institutions were taxed to their capacity. It is well to consider now for any emergency and be prepared to meet it. The period of unusual prosperity which our people are now enjoying may become disturbed without the slightest warning.

WILLIAM PFAFF, Chairman

ALBERT J. LAPLACE

LEON PFEIFER

In examining the preceding figures, we note that due to the War over two thousand less patients were admitted to the Hospital than the year before, and that the daily average was about forty-five less per day, although the accident cases were over one thousand more.

The Hospital days were less and the per capita cost has increased 25 cents, making the cost \$1.37, the lowest, I believe, of any like institution in the country.

The Outdoor Clinic cases have begun to show signs of increase.

The other figures are just what we expected to have during the year 1919.

#### IMPROVEMENTS

It is with a great deal of pleasure that I am able to call attention to the fact that the improvements I hoped to make during 1918, that is, electric light plant, new store house and new morgue, and three new ambulances, have been completed, or are on the road to be completed; in other words, we are now working on the wiring of the buildings, for which the contract has been closed for \$58,000. We have already signed up a contract for the new morgue, the new store house has been built, and the three new ambulances have been delivered, showing 100% in improvements, as outlined the year before.

The improvements during 1919 are as follows:

Paved with concrete around the ice house and bakery, and relaid the car tracks.

We built a 12,000 gallon tank to take care of the water used by the ice plant for condensing and again used by the laundry.

We put up a 1,400 gallon steel tank on the roof of the ice plant for distilled and reboiled water.

In the Bakery we put in one Champion Speed Beater.

We manufactured 1,078 tons of ice and made all the pies, bread and cakes used in the Hospital during the year.

In the Nurses' Home we put in one Sectional Book Case, tables, and one combined Baloptican and Mazda Lamp.

In the White Women's Building, 18 new radiators were installed.

In the X-Ray Department, a Multoscope Type Table, Klinoscope, Coolidge Tubes, etc., were installed at a cost of \$2,291.57.

In the Laundry, we put in one Universal Press with Steaming Device, one Shirt-body Press and one Sleeve Press, at a cost of \$759.50.

In the Main Kitchen, we installed one Slicing Machine; one new Range (through the generosity of Judge Jos. Breaux) at a cost of \$1,500, and a new diet Kitchen at a cost of \$160.00.

Mrs. Dibert contributed two new Cadillac Ambulances. We took the old Packard Ambulance chassis and built a truck at the cost of \$294.00.

We bought one Gas Anaesthesia outfit for the Miles Amphitheatre.

The new Store-House Building was erected at a cost of \$10,212.10.

The entire Electrical Signal System was remodeled.

Old wooden floors were removed and the space filled in with cinders and concrete coating and then tiled, as follows:

Nurses' Dining Room, Milliken Building

Doctors' Reception Room

Sisters' Office

Receiving Room

Ward 36, Hall

Nurses' Home, that is, the Cooking School.

We moved the Admitting Room to the Drug Store, Drug Store to the Accident Room and Accident Room to Admitting Room.

We have been compelled to use the second floor of the new Warehouse building for the female help, and the building was equipped accordingly.

Ward 4½ was changed to the Doctors' Reception Room and fitted up with furniture, etc. Ward 3 was changed into Receiving Room; this Receiving Room is fitted up with baths and barber chairs, where all male patients will be taken before being sent to the wards and properly bathed and cleaned.

We also equipped the Nurses' Dining Room with new porcelain top tables.

All of the buildings have been renovated and have a neat, clean appearance, as we keep a corps of eight painters working continuously.

In conclusion, I wish to register my appreciation of the support given me by the Board of Administrators and also the work done by the two House Surgeons, Secretary, and Sisters of Charity.

Yours respectfully,

S. W. STAFFORD, M. D.,  
Superintendent

# Report of the Treasurer

NEW ORLEANS, December 31st, 1919.

To the Board of Administrators, Charity Hospital, New Orleans, La.

Gentlemen:—I respectfully submit below summary of receipts and disbursements, and on the pages following, comparative statement.

STATE OF LOUISIANA  
OFFICE OF  
SUPERVISOR OF PUBLIC ACCOUNTS  
BATON ROUGE, LA.

March 1, 1920.

To the President and Members Board of Administrators, Charity Hospital, New Orleans, La.

Gentlemen:—This is to certify that the periodical examinations made by this office of the books, accounts and vouchers of the Charity Hospital, as kept by Secretary-Treasurer, Fred. W. Matthews, proved that the cash receipts and expenditures of the General and all Special Funds during the calendar year 1919, were as follows:

Cash Balance, January 1, 1919.....	\$ 5,246.91
Receipts, January 1 to December 31, 1919.....	<u>475,341.92</u>
Total Balance and Receipts.....	\$480,588.83
Expenditures During Same Period.....	<u>466,524.98</u>
Cash Balance, December 31st, 1919.....	<u>\$ 14,063.85</u>

Of the above balance, \$750.00 was held by the Secretary, \$200.00 was held by the Sisters, while there was on deposit in the City Bank Branch of the Whitney-Central Trust & Savings Bank, the sum of \$13,113.85.

Yours very truly,

W. N. McFARLAND,  
Supervisor of Public Accounts.

Shaheen, P., Amite, La.	42 yards sheeting.
Springer, Bernadine and Georgie, 731 Bartholomew.	\$10.00.
Sunshine Society	1 gallon brandy.
St. Margaret's Daughters	3 entertainments, ice cream, cakes, candies and 25 cents to each patient.
St. Margaret's Daughters (Through Mrs. Lusher)	5 gallons ice cream.
St. Margaret's Daughters (Through Maris Circle)	1 box oranges.
Trosclair, Etienne, Lockport, La.	4 sacks potatoes.
Tubercular Helping Hand Circle, through Mrs. Guyette, President	Refreshments, Jan., Feb., March and April: 6 chickens, 30 pounds bacon, 4 shoulders lamb, cocoa, 4 turkeys, cranberries, celery, sandwiches. 50 pairs pajamas. Select periodicals, monthly.
Unknown	5 yards dress material.
Ursuline Convent	20 pounds coffee, 20 pounds tea.
Villas, Miss.	
Walle, Mrs.	

# Pathological Department

NEW ORLEANS, March 6, 1920.

The Board of Administrators of the Charity Hospital, Dr. S. W. Stafford, Superintendent.

Gentlemen:—I have the honor to submit to your Board a detailed comparative statement of the work done by the Pathological Department for the years 1918 and 1919. As will be noted, there is an increase of 19% in the total number of examinations of all types performed for the year 1919. A perusal of my monthly reports will show that the number of examinations performed for the six months from July 1st, 1919 to December 31st, 1919 were approximately triple the number of those performed for the six months from January 1st, 1919 to June 30th, 1919. The reason for this is that during the latter part of 1919 we secured competent laboratory workers as additions to our officieral staff. We have been exceptionally fortunate in securing the services of Dr. Rigney D'Aunoy as one of the assistant pathologists. His superior training, highly efficient services and unwavering loyalty to the Institution have done much in placing the work of our department upon its present high basis.

I have been able, outside of directing the work and producing antitoxins, to institute a Division of Chemistry, and suggest an alteration in the method of distribution of our surplus supply of antitoxins. The division of chemistry has been made possible largely through the initiative and energy of our efficient hard-working Pathological Internes, Dr. M. P. H. Bowden and Dr. Aldea Maher. Under the plan I suggested, our surplus antitoxins would be marketed directly as a Charity Hospital enterprise and the whole revenue derived from their sale would revert to the institution. During the year 1919 there were sold throughout the State as Charity Hospital Antitoxins, 2,224 doses of all types. Your honorable Board will note that there is an increase of 34% in the number of doses of antitoxins furnished our drug store for use in the hospital, and it does not appear necessary to again call your attention to the resulting financial saving to the institution.

It is gratifying to learn through our Superintendent that the Board has seen fit to approve the tentative budget submitted by me for 1920-21. Needed items of equipment must be purchased; most of the microscopes, incubators and sterilizers at present used in the laboratories are the property of Tulane University, and after a number of years of use are becoming unserviceable and will necessarily have to be replaced from time to time during the next few years. The question of salaries paid our skilled help is also one of importance, and I feel we will not be able to retain their services unless some re-adjustment in their compensation be made.

Our morgue has been thoroughly renovated, and a mortuary with mechanical cold storage plant added. Our worthy Superintendent, Dr. S. W. Stafford, allowed me on numerous occasions to consult with him and make suggestions regarding the improvements in the morgue.

Finally, I desire to call the Board's attention to the large number of new tests performed by the Department since the last yearly report. No other hospital in the country can boast of a fuller report along all lines of laboratory activities, and as we are the only institution manufacturing its own antitoxins with a resulting considerable financial saving, I feel that we should all be greatly gratified to note that our endeavors in the building up of a real Pathological Department—the one department as hospital administrators well know about which all other hospital activities center—have not been in vain, even though the circumstances, due principally to our peculiar financial conditions, have at times been trying.

Respectfully submitted,

CHAS. W. DUVAL, M. D.,  
Director of Laboratories.

# Roentgen Ray Department

NEW ORLEANS, February 12th, 1920.

Dr. S. W. Stafford, Superintendent, Charity Hospital, New Orleans, La.

Dear Sir:—In presenting my annual report, attention to the following comparative table is especially invited. The increased patronage shown by requests made upon this department throughout the past year, coming from the Medical and Surgical Divisions of both House and Visiting Staffs, likewise the Accident Service and the Out-Door Clinics, proves the advancing steps of the Roentgen Ray Laboratory, in keeping with the ever rapid strides of medical science in the diagnosing and treatment of the sick.

It is an evident fact that in certain pathological conditions, a positive diagnosis cannot be made, or the case be considered scientifically worked up, where X-Ray evidence has been omitted. As a matter of fact, the value and importance of the laboratory as a whole in its relationship to the practice of medicine, is truthfully shown from the classification of hospitals by a committee of the American Medical Association who look into records, its equipment and personnel, and along with other compiled data the institution in question is thereby judged and classified accordingly.

It is particularly gratifying to be able to state here that this laboratory is now equipped with a modern Radiographic Table; a universal Klinoscope for doing Fluoroscopic work, and a system of Coolidge tube apparatus, which have given satisfaction and means for efficiency and economy. Installed also is a Granger Localizer instrument that has proven its value.

During the year, there was a sum of one thousand one hundred and thirty-four dollars collected from sources as follows:

Compensation Insurance Cases	\$ 784.00
Discarded Old Glass	200.00
Discarded Old Apparatus	150.00
<hr/>	
	\$1,134.00

	1918	1919
Total Number of Exposures Made	4,215	10,121
Total Number of Plates Made	3,597	6,925
Total Number of Patients	3,177	8,799
Total Number of Fluoroscopic Examinations	85	1,944

#### Number of Parts Examined:

Upper Extremities	998	1,042
Lower Extremities	1,030	1,042
Gastro-Intestinal Tract	242	435
Genito-Urinary Tract	125	263
Skull and Bones of Face	265	356
Thorax	260	409
Abdomen and Pelvis	69	210
Cases Treated, Exposed to X-Rays	567	2,271
Patients with Bullets, Localized		20

Respectfully,

JAMES B. HARNEY, M. D.  
Roentgenologist.

NEW FLUOROSCOPIC TABLE—X-RAY DEPARTMENT

## Report of Dental Clinic

NEW ORLEANS, February 11th, 1920.

Dr. S. W. Stafford, Superintendent, Charity Hospital, New Orleans.

Dear Doctor:—The work accomplished in the afternoon dental clinic has been far below that of previous years, due to the fact that there has been instituted the morning clinic and also that we have not been getting the co-operation from the hospital. It is true that the Visiting Staff has not been attending as punctually as they should but their excuse was that the patients were not sufficient to cause them to leave their busy office.

We have since changed the staff to five men who will visit the hospital each afternoon of the week except Saturday, and I would like to have all the patients possible referred to the dental clinic so as to keep these men interested. They are all first class and I know the patients will reap the benefits.

During the year 1919, the following work was accomplished:

Patients Treated.....	805
Fractures.....	12
Surgical Treatments.....	65
General Anaesthesia.....	8
Extractions.....	1,046

The following names constitute the afternoon dental staff who will visit the hospital on certain days:

DR. BEN. J. MATHEWS.....	Mondays
DR. C. A. ADOLPH.....	Tuesdays
DR. J. P. WAHL.....	Wednesdays
DR. JAS. ARROYO.....	Thursdays
DR. ELMORE CHENETT.....	Fridays

Very truly,

J. P. WAHL, D. D.,  
Chief of Dental Staff.

# Report of the Hay Fever Clinic

NEW ORLEANS, January 6th, 1920.

Dr. S. W. Stafford, Superintendent of Charity Hospital, City.

Dear Doctor Stafford:—The third year of the Hay Fever Clinic of the Charity Hospital indicates the growing interest of the public in the advantages of the immunizing treatment of this disease. During the active season of Hay Fever, the attendance ranged from 30 to 40 patients for each clinic day.

## HYGIENIC MEASURES

As Hay Fever is due to the pollen of plants, most of which are noxious weeds, all patients treated in the Hay Fever Clinic of the Charity Hospital are given charts of nine blocks of their neighborhood, with instructions to locate thereon lots that are infested with weeds. When this has been done, the charts are sent to the City Board of Health, which notifies the owners of the lots to cut the weeds under penalty of prosecution for violating the grass-weeds ordinance.

## DIET

As diet is a factor in hay fever and hay fever asthma, patients are advised regarding the selection of their food, the directions varying according to the form of the disease from which the patient is suffering.

## POLLEN THERAPY

In all cases in which pollen extracts are used, the diagnostic tests are applied in order to determine the character and degree of the hay fever reaction. This test consists in injecting into (not under) the skin of the forearm, five units of the pollen to be tested.

After the character and degree of the sensitization have been determined, the preventive treatment is commenced by injecting the extract of the pollen to which the patient is sensitive and to which he will be exposed.

The pollen extracts for the preventive treatment are usually injected two or three times weekly and gradually increased to 100 to 200 units.

As soon as the specific pollen from which the patient is suffering appears in the atmosphere, as shown by the pollinometric records, the injections are reduced to 20 to 30 units, as the patient is then exposed to the atmospheric pollens.

## POLLEN AND VACCINE THERAPY

While our experience has shown that pollen therapy is useful in the treatment of hay fever, we found that there were many cases in which this form of treatment alone did not give satisfactory results. With the majority of patients, therefore, this was combined with the vaccine therapy.

If the patient applies for treatment during a severe period, a vaccine is used, this being injected at intervals of one or two days until the severity of the attack subsides. The pollen extract is then used, the vaccine injections being resumed if a severe paroxysm develops.

### AUTOGENOUS VACCINES

The vaccine used in the cases reported were stock vaccines prepared for us by Eli Lilly & Co., and based on the bacteriologic examination of our hay fever cases. We believe, however, that autogenous vaccines would yield more uniformly satisfactory results, and therefore request that these be furnished by the Pathological Department of the Charity Hospital. All other vaccines and the pollen extracts used in the Hay Fever Clinic are furnished without cost to the Hospital.

### HAY FEVER AND ASTHMA

An analysis of the cases of hay fever treated in the clinic indicates that 37 per cent of the cases developed asthma at some period of the disease. In many of these cases the attacks were light, and at long intervals; in others, the asthmatic attacks were so severe and frequent that it formed the predominant feature of the disease.

In the immunizing treatment of hay fever in the clinic, the cases which were complicated with asthma gave practically the same results as those with the uncomplicated form. As a result of this, an increasing number of patients began to apply for treatment when apparently suffering from asthma only.

These patients are given our diagnostic test for hay fever, in order to determine which of the cases are due to hay fever. When this proves negative, the cases are referred to other clinics. The results of these tests indicate that there are many cases of hay fever in which the nasal symptoms are so mild as to be almost unobserved or even entirely absent, and in which asthma is the predominant feature.

An important feature in the history of these cases is the question of synchronicity with the prevalence of hay fever. This is not absolutely reliable, however, as the atmospheric pollens vary considerably in various localities. In New Orleans, for instance, we have the false wormwood, Parthenium hysterophorous, which is a perennial bloomer, and may cause hay fever or asthma at any season of the year.

### ANALYSIS

The annexed is the analysis of the number of cases treated and the results obtained, which has been prepared for the "Record Room Report of the Medical Division for Respiratory Diseases."

Very sincerely,

W. SCHEPPEGRELL, M. D.

N. F. THIBERGE, M. D.

# Report of the Directress of Nurses

NEW ORLEANS, LA., February 28th, 1920.

To the Board of Administrators, Charity Hospital, New Orleans, La.

Gentlemen:—In submitting a report we naturally must survey the past. Previous statements describe the shortage of nurses as serious, today the situation is alarming. This is not a loose assertion, inquiry among training school executives will disclose the unanimity of opinion of this fact. That the popular demand does not create the supply is evident. Let us hope that the State will produce strong women who will perpetuate the precious ideals so patiently and laboriously wrought by the nursing profession and that this general depression will not cause the reincarnation of that type of woman who characterizes the nurse of elapsed epochs of history.

Speculation is rife as to the cause of this critical condition. Many women otherwise eligible are deterred from entering the school by the financial embarrassment resultant from the unproductive years given to training. A marked impression is made upon the aspirant by what the school offers in educational and housing conditions. A full appreciation of the importance of these factors in drawing candidates to the training school is being more fully comprehended. We should provide for our pupils good teaching and suitable teaching equipment. Living and working conditions should be made as agreeable as possible. Good quarters and good food tell wonderfully on efficiency and discipline. It is hardly necessary to emphasize the need of a well equipped library, and we take this opportunity to thank the members of our staff who have contributed to its growth.

The duplex function of the Training School is sometimes submerged by what may appear as larger activities. The care of the sick is indeed a vital function but not the only and ultimate purpose of the school. The less tangible, though equally important activity, the education of women to fill the depleted ranks is sometimes discounted. We are supposed to acquire and maintain the highest standard in our output with the minimum necessity.

I wish to state, in order to illumine my motive, that I am not exploiting my personal views regarding the needs of our Training School but am simply expressing the policy of the League of Nursing Education. If we wish our school to maintain its rank we must conform to the reasonable standards of this recognized body or justify our independence of action.

Constant striving for better standards will eventually secure us the power and status which will attract the best type of women. We are anxiously awaiting the opportunity to introduce the eight hour system. This will be possible only when we can duplicate our present number of students. The necessity and utility of this system have been demonstrated by scientific and medical educators.

We have introduced into our curriculum this year a course in Public Health Nursing. This has been made possible by the addition to our staff of a trained and experienced public health worker who is thoroughly familiar with all the activities included under this phase of nursing.

The general health of the school remains normal despite the extraordinary demands. The nursing body deserves unstinted praise for its patient endurance and the willing sacrifice of personal interests to the demands of duty.

We call the attention of the imperative necessity of renovation in the Nurses' Home. We hope the long-felt need of screening the entire building will soon be realized. Other improvements are already on the way and we anticipate that we will be able to execute our plans through an increased appropriation.

To the Board we convey our sincere thanks for their kind co-operation.

We owe Dr. Stafford a debt of gratitude. The kindness and equity of his decisions elicit our respect and admiration. Special thanks are due Drs. Gelpi and Landry for their sustained efforts in maintaining discipline and co-ordination throughout the hospital.

We keenly appreciate the attention given to the sick nurses by the members of our staff.

We acknowledge the efforts of our teaching body who so generously share the responsibility in the training of the nurses.

The applicants accepted during the year were eighteen. The applications received numbered one hundred and sixty, compared with three hundred in 1918, three hundred and fifty in 1917 and four hundred in 1916. We have now in the Training School seventy pupils which is one-half of the normal number. The graduate staff consists of sixteen nurses and twenty-four graduate nursing Sisters.

These figures suggest the difficulty of providing care and treatment for so large a group of patients. However urgent the demand, we are unconditionally opposed to the introduction of two-grade nurses. This would open an arena of deadly competition within our walls. There is bound to be a reaction and there will come to the rescue women who will assume this strenuous social obligation.

## Report of the Social Service Department

---

NEW ORLEANS, February 18th, 1920.

To the Board of Administrators of the Charity Hospital of Louisiana, New Orleans.

Gentlemen:—The Social Service Department is now entering on its fifth year of work in the Charity Hospital.

We feel sure that the following report of our Head Worker, Miss Pace, will prove to the community the value and necessity of Social Service.

We also wish to thank the administrators and Dr. Stafford for their courtesy and co-operation.

Respectfully submitted,

MRS. J. B. ELLIOTT, JR.,  
President.

## Pulm. Embolism

**SUMMARY OF OBSTETRICAL CASES IN 1919 AS PER HISTORIES  
FILED IN RECORD ROOM**

There were 581 Maternity Cases delivered in the Hospital.

White.....	211	Primaparae.....	318
Colored.....	370	Multiparae.....	263
Presentations—			Positions—
Vertex.....		Left Occipito-anterior.....	326
		Right Occipito-anterior.....	157
		Left Occipito-posterior.....	11
		Right Occipito-posterior.....	4
Breech.....			
Transverse.....			24
Face.....			4
Foot.....			2
Hand.....			1
Not reported.....			1
			51
			581

**MANNER OF DELIVERY**

Naturally.....	528
By Forceps.....	12
By Podalic Version (some with forceps)	11
By Caesarian Section.....	30

There were 11 cases of Twin Parturition.

There was no case of Triplets.

**MORTALITY OF MOTHERS**

There were 12 deaths among the mothers, or only 2 per cent, as follows:

From Eclampsia (admitted in that condition).....	5
From Shock (1 Placenta Praevia, 1 Deformed Pelvis).....	2
From Rupture of Uterus.....	2
From Nephritis (with Organic Heart Disease).....	1
From Amoebic Dysentery.....	1
From Pulmonary Embolism.....	1

The number of Children born was 592.

Male.....	311	Delivered Living.....	518
Female.....	281	Still Born.....	74
